

PASSENGER INFORMATION DISPLAY SYSTEM (PIDS)

Scala's Passenger Information Display System (PIDS) is a comprehensive, multi-lingual system that distributes and displays real-time travel-related information to passengers and operational staff. When combined with master systems integration and powerful applications, train companies can utilise the power of PIDS to create a seamless passenger experience and increase operational efficiency.

Main Functions

- Display real-time travel updates to keep passengers informed.
- Automatically update train, bus and ferry schedules with the latest info.
- Provide weather updates and infotainment during travel.
- Broadcast emergency alerts for passenger safety.
- Integrate with train, bus and ferry display systems to improve traffic and passenger flow
- Inform passengers of connecting transport options.

KEY BENEFITS

Enhance Passenger Experiences

Provide passengers with critical travel-related information in real-time.

Centralised Control

Easily monitor and update content across all screens in the train station.

Role-based User Management

Ensure information security while empowering employees and promoting efficiency.

Easy Integration

Flexible API enables integration with train, bus and ferry Signaling System and Man Machine Interface.

Stable and Reliable

Robust system ensures 24x7 stability and reliability.

Report Generation

Continuous up-to-date train statistics and direct insights into possible improvements.
